

Add Secure Browser Controls to Your SSE

SSE protects the network. Now close the last mile.

Where SSE inspection stops

Standard SSE inspects HTTP/S traffic at the network layer. It cannot inspect WebSocket connections or binary stream sessions — the persistent channels used by Microsoft Teams Web, WhatsApp Web, Microsoft Copilot, ChatGPT, and most modern SaaS collaboration tools. Once the connection is established, all data exchange is invisible to the SSE layer.

SECURITY CONTROL	SSE ONLY	SSE + BROWSER CONTROLS
Strong network and access control—missing the last mile inside the browser session.		Complete Protection
What your Skyhigh SSE already covers (stays the same)		
Network and access control	✓	✓
URL filtering and threat protection	✓	✓
Malware, phishing, and zero day threat prevention	✓	✓
SSL/TLS inspection of encrypted web traffic	✓	✓
DLP in transit for files and email	✓	✓
SaaS and private application access control	✓	✓
Shadow IT discovery and app risk scoring (CASB)	✓	✓
Zero Trust Network Access for private applications	✓	✓
Data inspection in motion at the network layer	✓	✓
User and device identity enforcement	✓	✓
What Browser Controls adds to the session layer		
Inspect and block AI prompt inputs before they reach external models such as ChatGPT, Copilot, and Gemini	✗	✓
Control copy/paste of sensitive data in browser sessions	✗	✓
Control downloads, uploads, and printing in active sessions	✗	✓
Digitally watermark screenshots of sensitive browser content	✗	✓
Govern BYOD and contractor sessions without an endpoint agent	✗	✓
Session level audit log for every controlled event (SIEM ready)	✗	✓

Beats Enterprise Browsers Every Time.

All The Protection.

None of the Headaches.

Less than 10% of The Cost.

No browser migration, no endpoint agents, no 3-to-6-month rollout. Full coverage of BYOD and contractor devices that enterprise browsers structurally cannot reach.

Business Outcomes

- **Complete Data Protection:** Network to last-mile browser session
- **Secure Access for Everyone:** Contractors, partners, BYOD covered
- **AI Tool Guidance:** Block leakage to ChatGPT, Copilot, Gemini
- **Activates in Minutes:** No migration, no agent, no disruption
- **90% Lower Cost:** Lowest-cost path to closing the gap
