

The Compliance Gap

Why Traditional Playbooks No Longer Work

In many organizations today, compliance is supported by a set of distributed controls:

Legal teams define regulatory obligations and policies

IT teams manage applications, systems, and infrastructure

Security teams deploy and operate isolated security tools

As a result, visibility gaps emerge across:

- Active SaaS usage and collaboration-driven data sharing
- AI prompts carrying personal data
- Shadow apps beyond procurement oversight

How Skyhigh Security can help you?

Skyhigh transforms compliance through a single control plane enforcing policies across all data flows, by:

Inline Enforcement: blocks policy violations in real-time

AI-Aware Enterprise Protection: enforces controls across enterprise AI usage

Automatic Evidence Generation: ensured through real-time auditable actions

The Technology Behind Continuous Compliance

Sensitive data discovery and risk assessment:

Leverage multi-layered inspection using ML Classifiers, Exact Data Matching, and OCR to find structured and unstructured data across all SaaS (sanctioned and unsanctioned).

Result: Total Visibility: Eliminate "hidden data" risks by identifying sensitive info in both sanctioned and shadow apps.

Purpose and access control:

Benefit from context-aware enforcement by restricting data sharing based on user, device, location, and real-time risk scores.

Result: Least Privilege: Ensure personal data is only accessed for stated business purposes, preventing unauthorized exposure.

Shadow AI governance:

AI Guardrails identifies unapproved AI services and inspects prompts/responses for personal data in real-time.

Result: Secure Innovation: Allow "Block, Allow, or Coach" actions to prevent sensitive data from training public AI models.

Risk assessment:

Draw on SSE-Backed Intelligence to combine user behavior (UEBA) with service risk to provide deep data security context.

Result: Proactive Mitigation: Prioritize high-impact remediation based on actual anomalous data usage patterns.

Continuous Adherence:

Gain automatic audit trails as every access and enforcement action is securely logged.

Result: Audit-Ready Always: Reduces manual compliance effort by providing evidence-grade reports for regulators.

Insights from Industry Analysts

Omdia Universe: DSPM 2025: Omdia's assessment of the 2025 DSPM market underscores Skyhigh DSPM's impact:

- Best-in-class for advanced posture
- "Top-Tier" across Core Capabilities & Solution Breadth
- Deep Visibility & Control
- Comprehensive Platform Advantage Management
